#### Assessment

The child has large shunt and the child should undergo Early elective VSD closure in the next 1-2 months given the late presentation with all the predictable natural history  
To start Tab Amifru 1/4 tab twice a day till surgery  
The surgery is a major open heart surgery, Closure of large VSD and the the chance of survival with operative success with this surgery remain 98% in the present circumstances  
Risk; benefits explained  
The approximate cost of this major open heart surgery is Rs 2,50,000 in the present circumstances and this would include the usage of blood products and also prosthetic materials for a maximum of 14 days of hospital stay  
The D/D should be in favor of " Sir HN Hospital Trust" payable at Mumbai  
Inform SOS

Date of admission  
28th January 2018.

Date of Surgery  
29th Jan 2018
