Dr Shivaprakash K MBBB,MS( Gen.Surg), MCh(CVTS)

## To whomsoever it may concern

This is to certify that Baby Kiara Sanket Ghotarkar, 1 month old female child D/O Sanket Sharat Ghotarkar, residing at Panvel, Mumbai and Maharashtra has been evaluated by us and is having Large unrestrictive perimembranous ventricular septal defect (VSD), severe pulmonary hypertension and in congestive heart failure despite medications.

The child is symptomatic despite medications as of now. The child needs to be operated early in view of the cardiomegaly, symptoms and echo findings. The child requires early elective closure of VSD and it is a major open heart surgery. It has a success rate of 99% in the present circumstances and carries 1% risk of life.

The approximate cost of this Major open heart surgery is Rs 3, 00,000 (Grade 5) for a maximum of 14 days of hospital stay and this includes the approximate consumption of blood products and prosthetic materials. The parents find the cost un-affording and require financial assisting.

The D/D should be in favour of "Sir HN Hospital Trust" payable at Mumbai.

Any queries/ clarifications in this regard are most welcome
